mb: A: You don't need to install cygwin for running the SDK. Open the SDK itself and point to the proper version. This invention relates to lactic acid derivatives and more particularly to certain novel (2R,3S)- and (2S,3S)-3-[N-[[N-[2-(3,5-difluorophenyl)acetylamino]carbonyl]amino]benzoyl]amino]-2-oxo-1-pyrrolidineacetic acids and to their use as antibacterial agents. The penicillins and cephalosporins are most widely used antibacterial agents presently in use today. Unfortunately, the compounds are relatively inefficient against certain gram-negative bacteria. Recently, several new antibacterial agents, i.e., the quinolones and cotrimoxazole, have come on the market. However, the treatment of bacterial infections with any of these agents is often unsatisfactory.Q: How to extract the small differences between list of time ranges? A normal thing would be to create a list of time ranges like: data: [['01:00:00', '01:05:00'], ['01:05:00', '01:10:00'], ['01:10:00', '01:15:00']] I want to extract the difference of all the sublist. The result is: data: [['01:05:00', '01:10:00'], ['01:05:00', '01:10:00'], ['01:10:00', '01:15:00']] Is there any good way to do it in a clean manner? Sure, use diff: In [3]:

[list(x) for x in [['01:00:00', '01:05:00'], ['01:05:00', '01:10:00'], ['01:10:00', '01:15:00']]] Out[3]: [['01:05:00', '01:10:00'], ['01:05:00', '01:10:00'], ['01:10:00', '01:15:00']] Or, in 2.7: In 82157476af
